

Two large and spacious hoods are available.  
The standard N-Hood has one large front flap.  
The new S-Hood is divided horizontally providing easy access to the baby without opening the entire front door.  
The S-Hood requires less space while opening.

Both hoods are available with **single or insulating double walls**.

The double walls provide a unique air warming system which creates an effective **warm air curtain** over the entire patient area. It insulates the baby from cooler surroundings and prevents radiative heat loss.

#### **The single wall option**

The incubators with double wall system can easily be turned into a single wall incubators for larger babies with higher heat production.  
The removable inner walls make cleaning easy.
